MESH × SIMAN LABS SUPERSTAR

Check before you trust.

A living evidence network for people, institutions, developers and AI agents. Already shipped. Here is what we build next.

INCUBATION PROPOSAL

Claims travel faster than evidence.

A claim is copied, cropped, translated and repeated. Its source, date and uncertainty fall away. Then someone acts on it.

Mesh reconnects the claim to its evidence.

01 **A post**

"This happened today." No source attached.

02 **A screenshot**

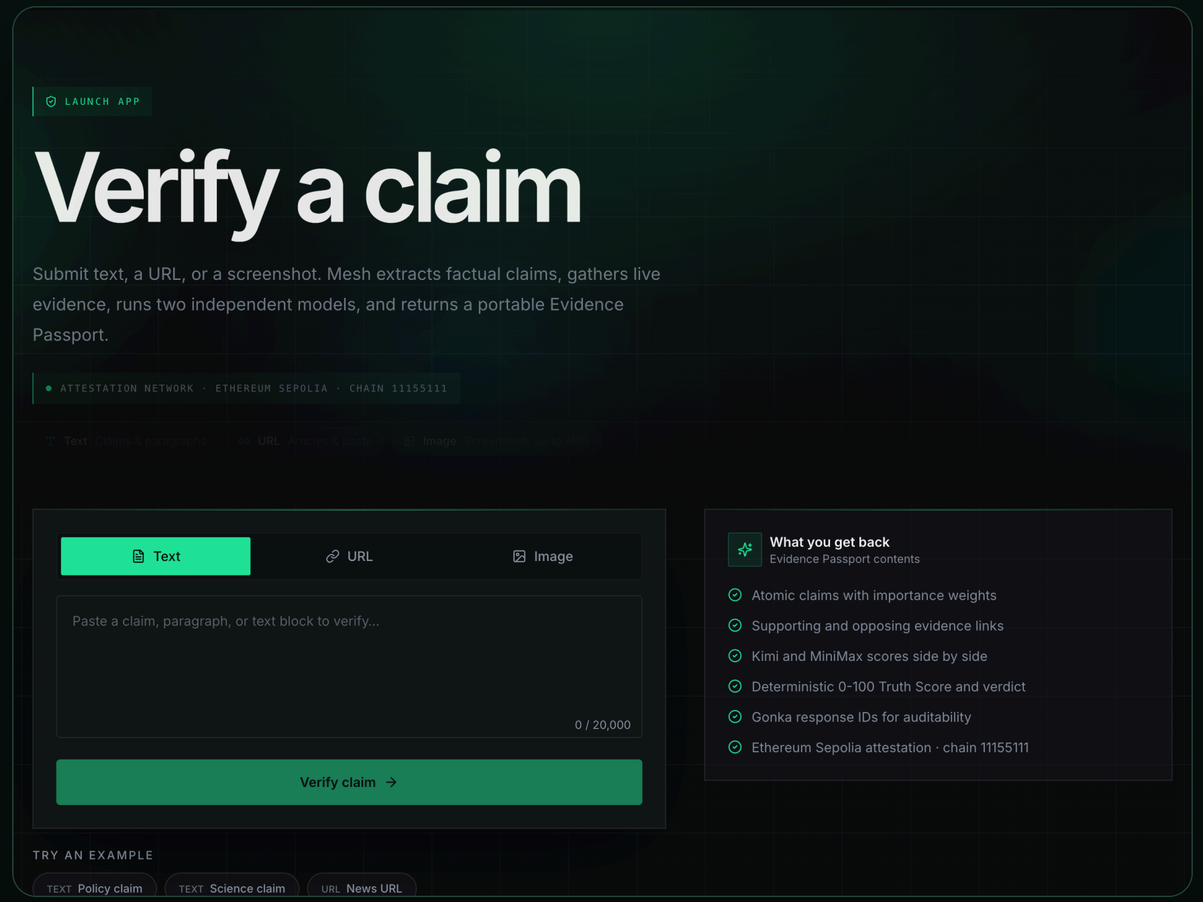

The original source disappears. The date is gone.

03 **A decision**

Someone shares, pays or approves based on it.

Not a concept. A working product.

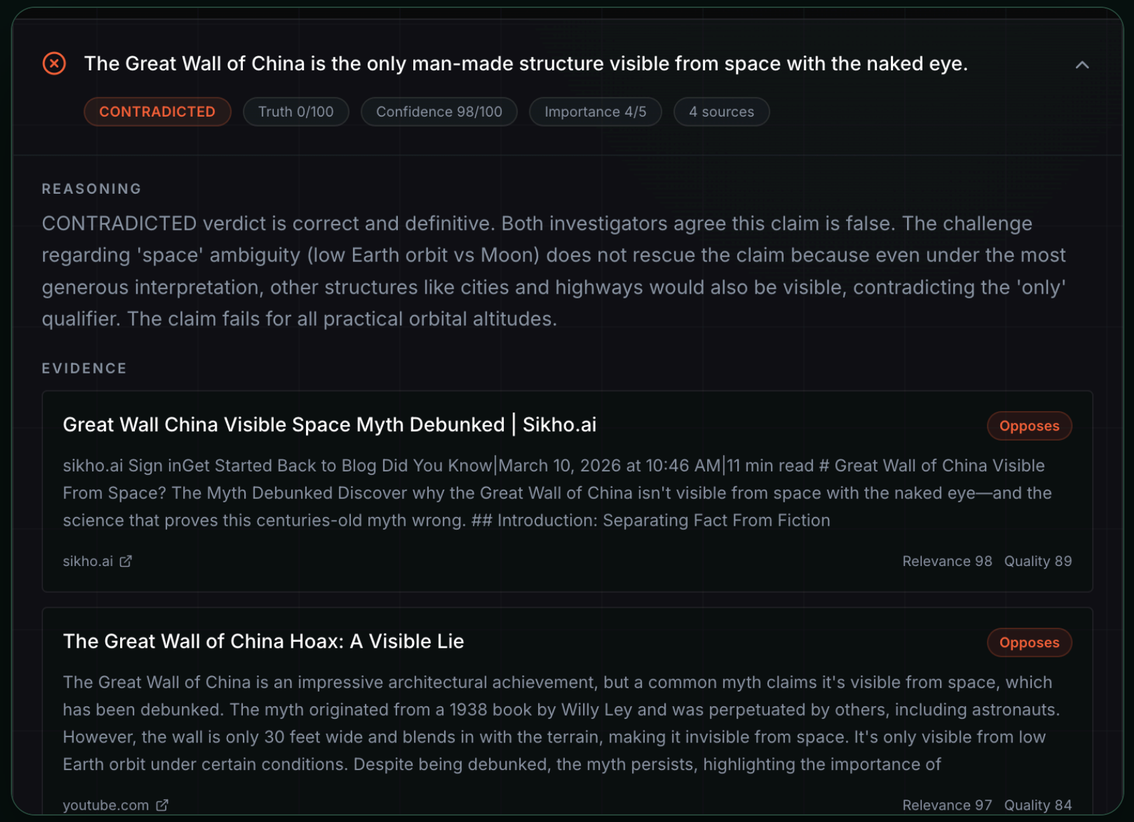

- Web app: verify text, a link or a screenshot
- Telegram bot and a documented REST API
- Independent AI investigators through Gonka Router
- Live evidence retrieval with Tavily
- Solidity attestation registry on Ethereum Sepolia
- Public passport pages, embeddable badge, JSON

SCREENSHOT OF THE RUNNING APP

A real passport, with a real on-chain receipt.

Real run: "The Great Wall is the only man-made structure visible from space with the naked eye."

TWO INDEPENDENT ASSESSMENTS

Investigator 1		66 UNVERIFIED
Investigator 2		73 SUPPORTED

Recorded disagreements

Models differ by 20 points on claim 9e364cdb-259e-4798-8c6c-8595e8cce339

ETHEREUM SEPOLIA RECEIPT — CONFIRMED

block 11,891,382 · chain 11155111

tx 0xdd756e2d…398a4a08

WHAT WE PROPOSE TO BUILD

From one-time check to living evidence.

Seventeen capabilities, one connected system. Each new surface reads the same claim, evidence, method and Passport history.

01 / INVESTIGATE

Claims + adaptive research

F02 · F03 · F06

FOUNDATION SHIPPED

02 / REMEMBER

Graph + source lineage

F01 · F04

03 / UPDATE

Versions + watches

F05 · F07 · F08 · F09

04 / ACT

Policies + attestations

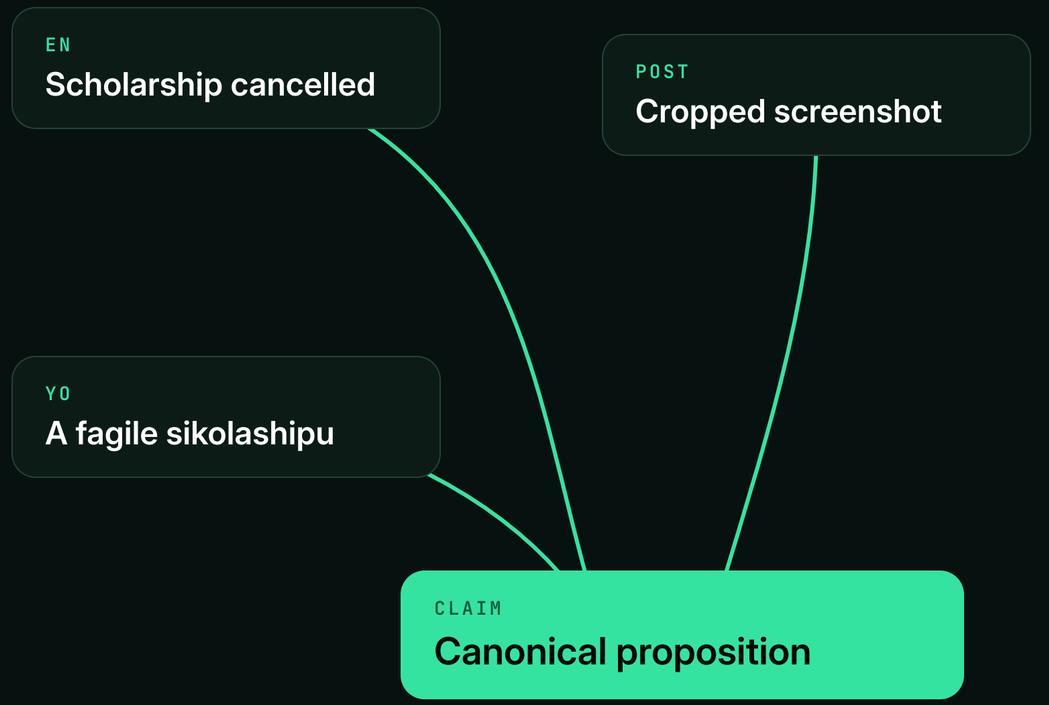

F10 · F11 · F12

Evidence assessment ≠ cryptographic integrity ≠ real-world truth

PROPOSED

The internet repeats. Mesh remembers.

Equivalent claims, translations and media variants resolve to the same proposition, only when meaning, place and time truly match.

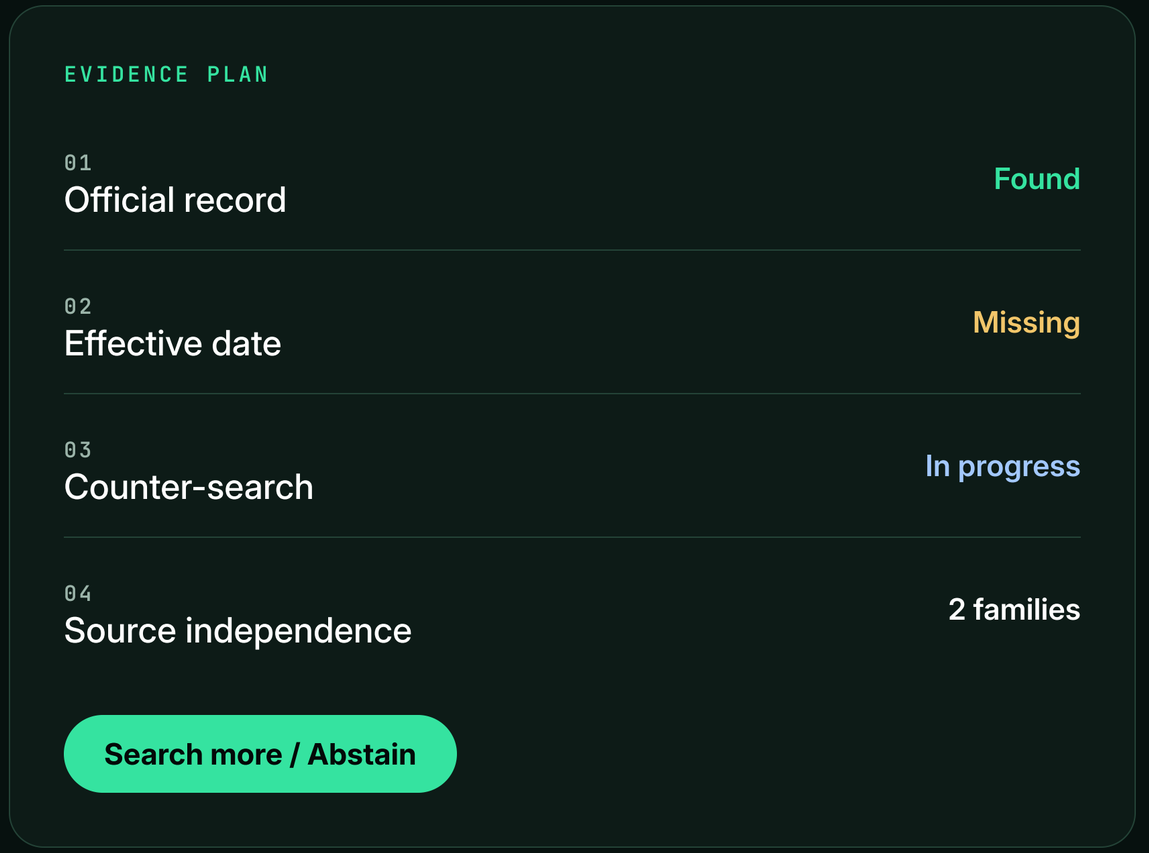

MATCH ONLY WITH CONTEXT

No automatic merge across negation or incompatible dates.

PROPOSED

Research that knows what is missing.

A typed plan seeks primary sources, counterevidence and coverage of every critical claim slot. Weak evidence produces an honest abstention.

A CLAIM ABOUT A POLICY

Who? What? Where? When? Under which condition?

PROPOSED

Every citation earns its place.

A cited sentence links to an exact source excerpt, a retrieval record, a preserved snapshot when permitted and the source family it came from.

EVIDENCE #04

VERBATIM

“The decision takes effect on 1 March…”

SOURCE	Official notice
CAPTURED	11 Oct 2026
LINEAGE	Original publication
CONTENT HASH	sha3: 7b42…d91a

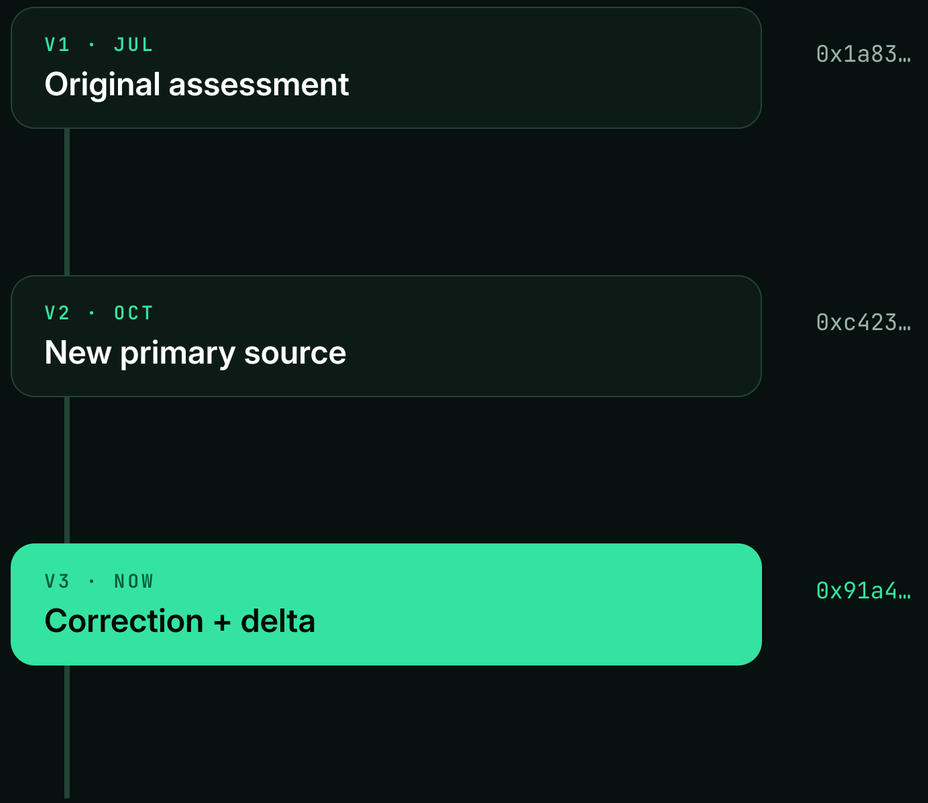

FIVE URLS ARE NOT FIVE CONFIRMATIONS

Source lineage reveals when reports all repeat one origin.

PROPOSED

A finding can change. The record cannot.

Each refresh creates a new immutable Passport version. Readers see what evidence moved, what stayed uncertain and which version was relied on.

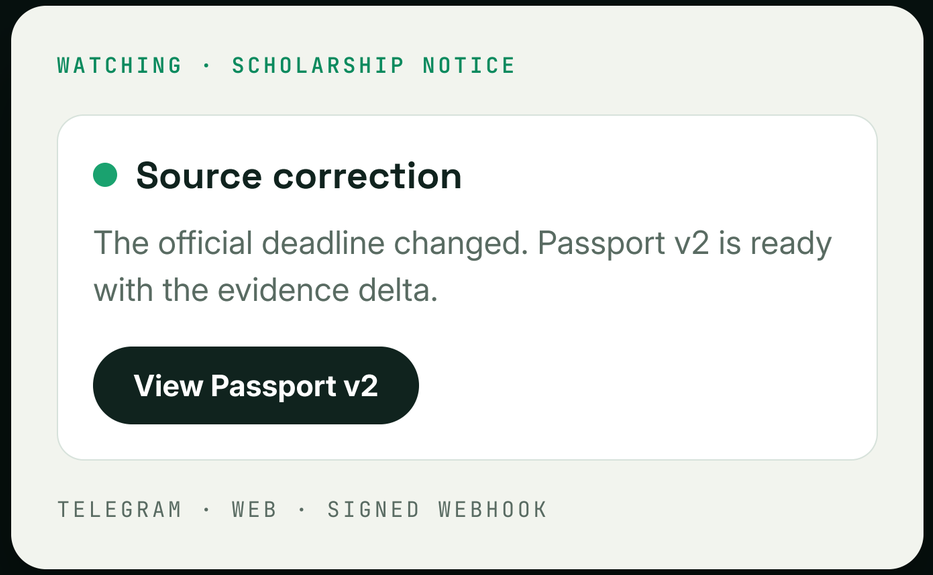

THE CURRENT VIEW IS A POINTER

Prior hashes and conclusions remain verifiable.

PROPOSED

When the evidence moves, people know.

Follow a claim. Receive one meaningful alert when a source corrects, a dispute opens or a Passport becomes stale.

MATERIAL CHANGES ONLY

A quiet subscription until trust changes.

PROPOSED

A real image can carry a false story.

Visual media gets separate findings for image provenance, context match, embedded text and the factual claim in its caption.

IMAGE

May be genuine

CAPTION

Context disputed

EARLIEST KNOWN INDEXED USE · NOT ABSOLUTE ORIGIN · CONCEPT VISUAL

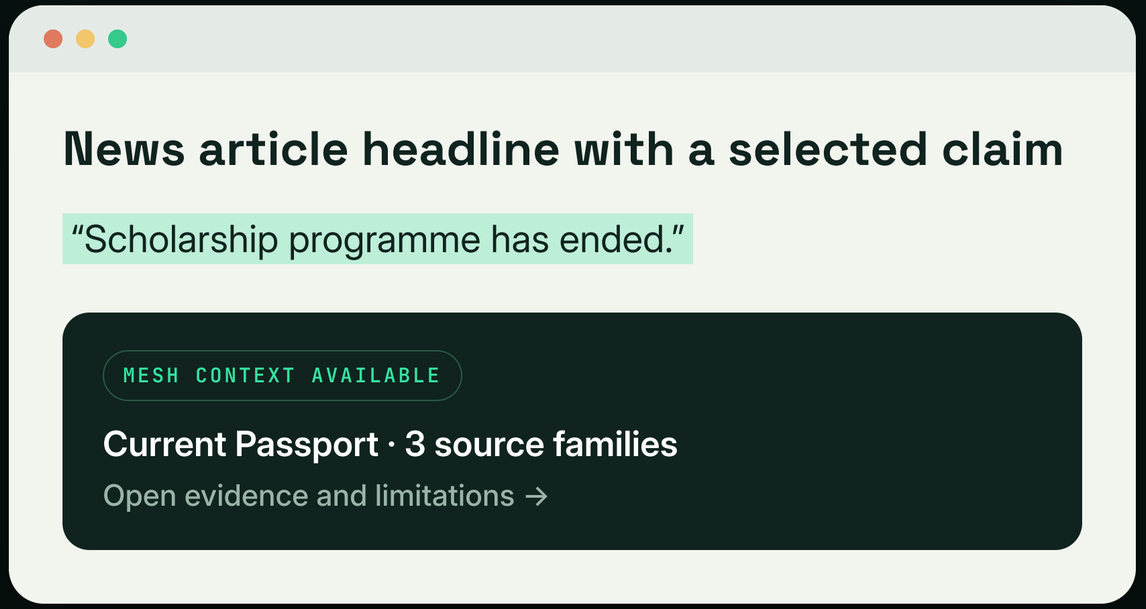

AUTHENTICITY ≠ CONTEXT

“No C2PA credential” is not evidence of a fake image.

PROPOSED

Context where the claim appears.

An opt-in browser layer finds a current Passport for selected text, images or URLs. People inspect context without leaving the page.

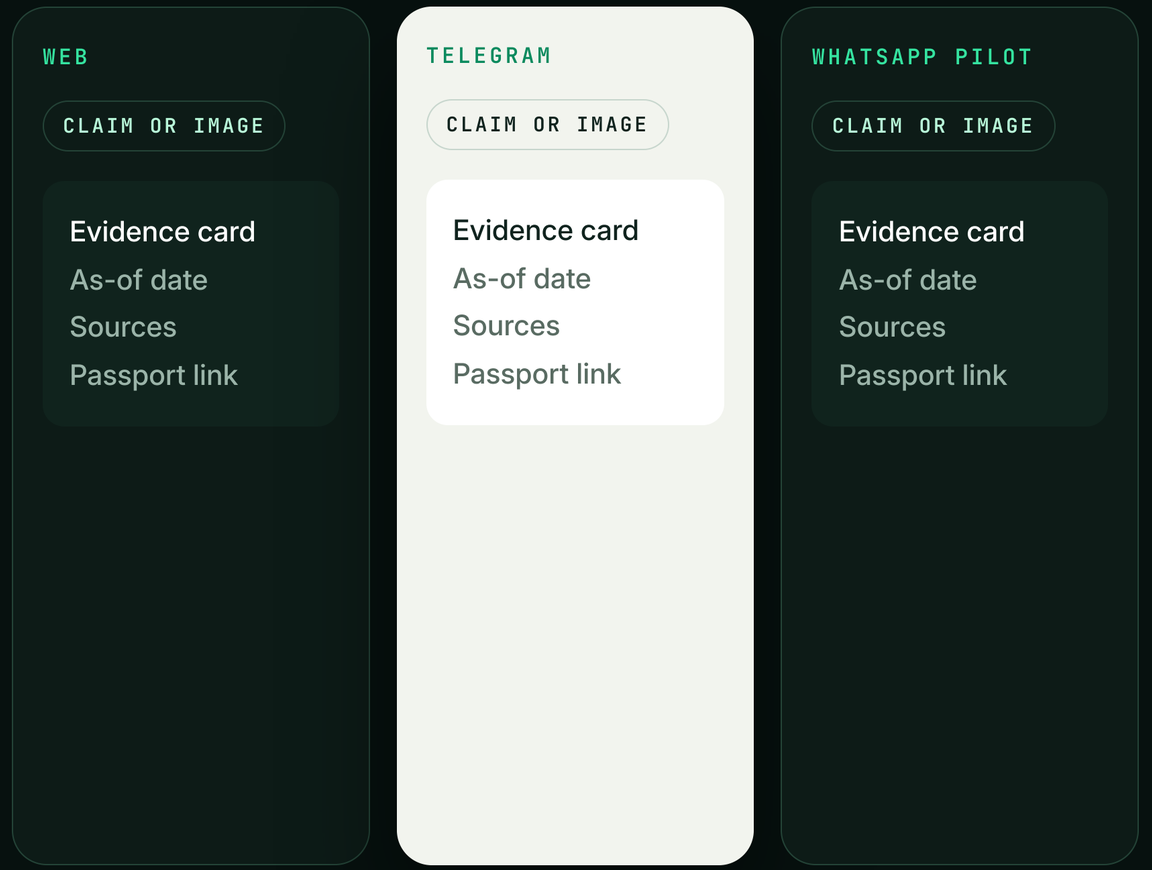

SELECT → LOOK UP → EXPLORE

Trust Tags show freshness and limits, not a magic verdict.

PROPOSED

Forward the claim. Get context back.

Web, Telegram and an authorized WhatsApp pilot use one verification backend. Replies carry a short grounded summary and the full Passport.

ONE PIPELINE / EVERY ENTRY POINT

No silent reading of private chats. WhatsApp needs provider approval and opt-in.

PROPOSED

A pause before the risky action.

One focused wedge: “Before You Share.” Mesh surfaces misleading context, missing proof and staleness when a person is about to forward content.

BEFORE YOU SHARE

This claim has context you should see.

NEW EVIDENCE	Official notice corrected
UNKNOWN	Original date unclear
NEXT STEP	Share with Passport link

PRODUCT CHOICE TO CONFIRM

The alternative wedge is Opportunity / Scam Check.

PROPOSED

Give agents evidence. Keep humans in control.

Typed tools return exact Passport versions, evidence and policy decisions. High-risk actions fail closed or escalate when information is stale or incomplete.

MESH.EVALUATE_POLICY

passportVersion	"v3"
freshness	"current"
sourceFamilies	2
requiredFamilies	3
decision	"ESCALATE"

A POLICY GATE IS ADVISORY

A supported verdict alone never authorizes a transaction.

PROPOSED

Verify the method, not just the artifact.

Signed Passports bind an exact assessment and method version. Third parties check hashes and attestations without confusing integrity with truth.

PASSPORT / V2

Method manifest

SCHEMA	2.0
SCORING	manifest: 4d21...
EVIDENCE ROOT	0x1a83...
METHODHASH	0xc423...

SIGNATURE VALID

ETHEREUM SEPOLIA / TESTNET

Chain confirmation proves publication and integrity.

PROPOSED

Measure accuracy. Defend the pipeline.

Frozen benchmarks expose retrieval and verdict failures. The evidence firewall treats pages, OCR and documents as untrusted input.

MESH BENCH

Citation exactness	TRACKED
Retrieval recall	TRACKED
Appropriate abstention	TRACKED

EVIDENCE FIREWALL

Untrusted source text cannot rewrite instructions, tools or scoring.

CONCEPT VISUAL · NO BENCHMARK RESULTS SHOWN

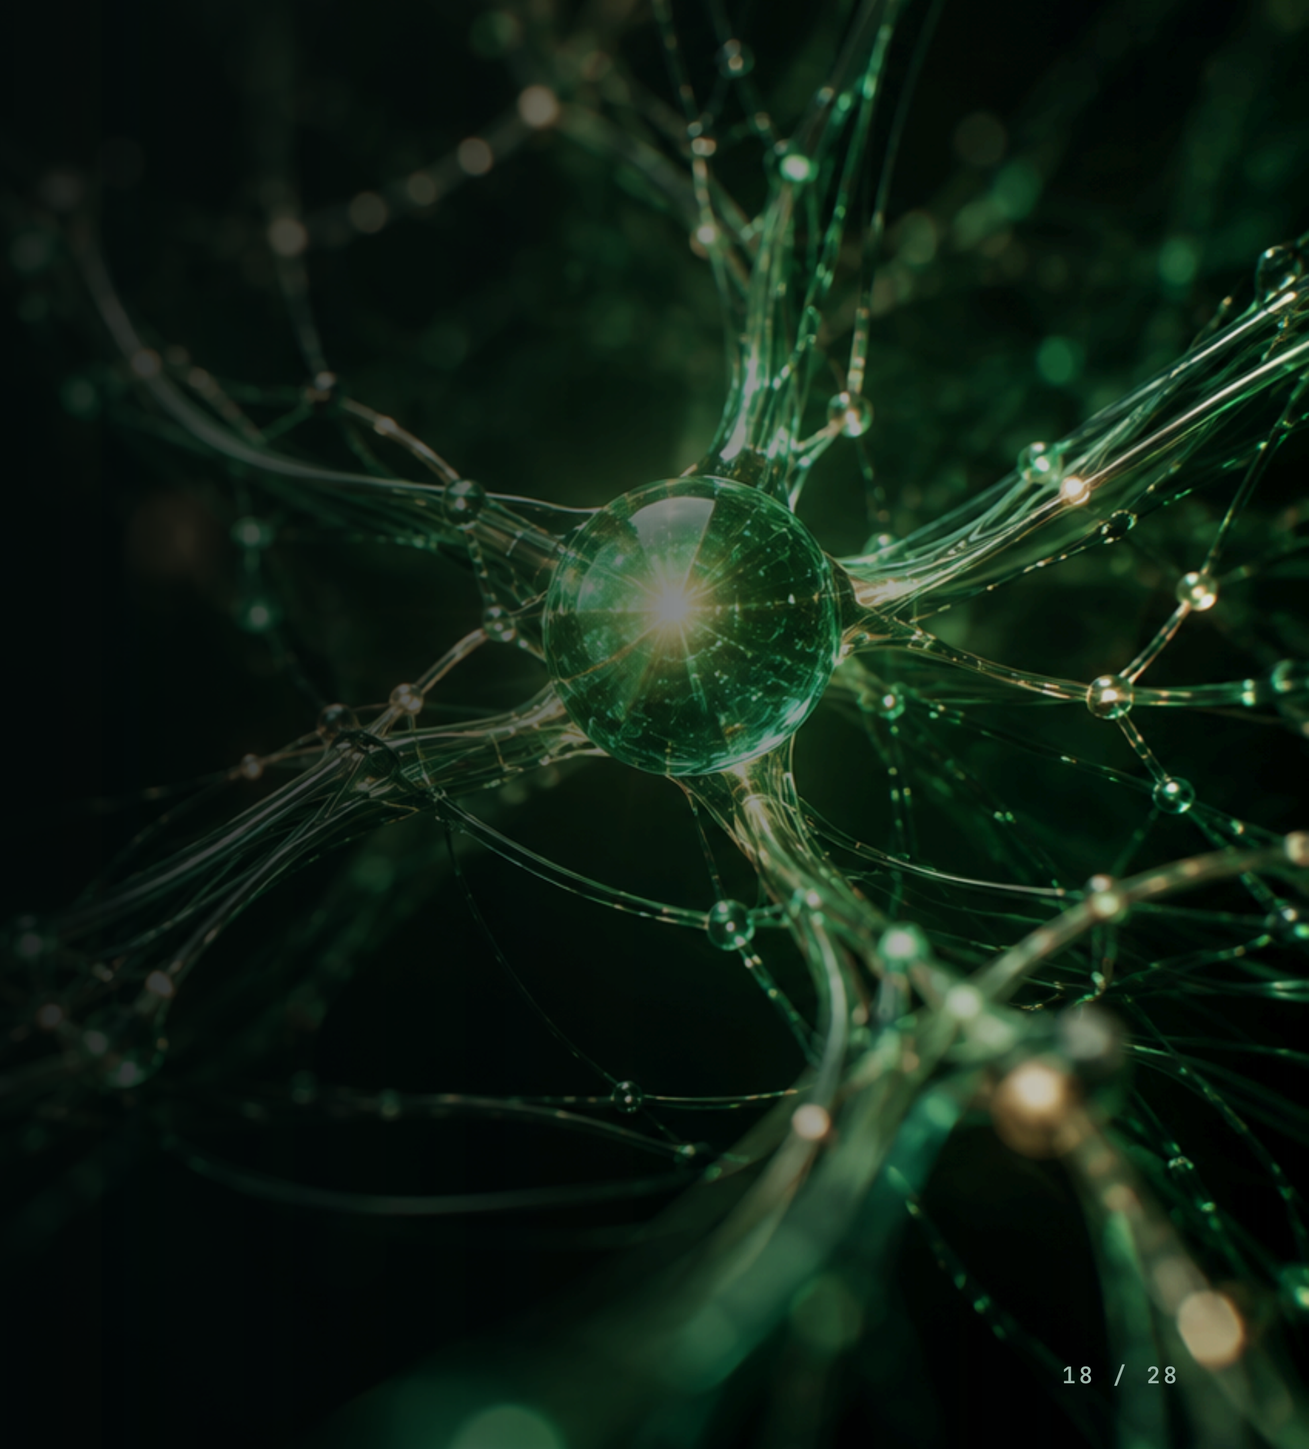

QUALITY BEFORE SCALE

Abstention, citation exactness and calibration are first-class metrics.

Gated pilots. Built on proof.

We pursue F13 to F17 after the earlier capabilities are solid: evidence lineage, living versions, explicit policies, security and measurable quality.

PILOT SCOPE · NO AUTOMATIC HIGH-STAKES ACTIONS

GATED PILOT

Auditable cases for real-world decisions.

Grant, DAO and narrowly defined insurance cases gather structured evidence and human review. The domain owner retains authority to approve or pay.

GRANT MILESTONE CASE

100 kits delivered by the agreed date

Distribution logs	Received
Beneficiary sample	Needs review
Reviewer sign-off	Pending

CASE OUTCOME ≠ AUTOMATIC PAYOUT

Missing records produce NEEDS INFO. Disputes stay visible.

GATED PILOT

An outcome dossier, not a betting oracle.

Mesh assembles timestamped evidence against rules locked before a market closes. An authorized oracle or jury still resolves and settles.

RESOLUTION SPECIFICATION

Did company X announce Y before 23:59 UTC?

RULE LOCKED	Before trading
EVIDENCE AS-OF	Deadline bounded
COUNTEREVIDENCE	Open during dispute
OUTCOME	Indeterminate allowed

PRECOMMITTED RULES / DISPUTE WINDOW

Ambiguous evidence escalates. A score never moves collateral.

GATED PILOT

Reward the missing proof, not the loudest opinion.

A bounded evidence need invites verifiable submissions. Reviewers apply a published rubric, and accepted evidence creates a new Passport version.

EVIDENCE NEED #127

Find the signed original notice.

REQUIRED ORIGIN	Agency domain
DEADLINE	Before date Y
REVIEW	Independent adjudicator

Submission → Review → Award

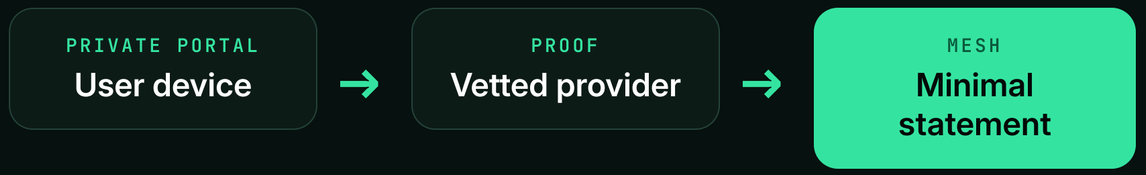

PILOT: OFF-CHAIN FUNDING FIRST

Payout follows review and dispute. Links alone earn nothing.

GATED PILOT

Prove a private source without surrendering it.

For one supported portal and narrow predicate, a vetted zkTLS provider can verify source origin and a minimal disclosed value. Mesh never needs the full private record.

PROVIDER TRUST MODEL + FIELD BINDING ARE EXPLICIT

SOURCE ORIGIN ≠ DATABASE TRUTH

Unsupported sites fail clearly. Credentials stay with the user.

GATED PILOT

Reveal only what the decision needs.

Selective disclosure proves included fields. A later true ZK pilot proves one bounded hidden predicate against a signed Passport root and policy.

SIGNED PASSPORT ROOT

0x91a4…e82c

SELECTIVE DISCLOSURE

Reveal chosen fields + Merkle proof

TRUE ZK PREDICATE PILOT

Prove policy condition without value

TWO DIFFERENT CRYPTOGRAPHIC CLAIMS

A valid proof verifies a commitment, not the source's factual honesty.

PROPOSED TARGET

One claim. Eight features. One story.

01

A misleading screenshot resurfaces

An old claim, cropped and recaptioned.

02

Memory recognizes it

The earlier investigation is reused. F01

03

Provenance finds the context problem

Real image, wrong story. F06 · F03

04

A new immutable Passport

Adaptive research and an explainable delta. F02 · F04

05

Context and an alert

A Trust Tag appears and a watcher is notified. F07 · F05

06

An agent fails the policy

Strict policy, same Passport. F10

Optional extras: one supported private-proof demonstration and a sandbox outcome-evidence dossier, without pretending unresolved research is production-ready.

RELATIVE WEEKS · ADJUST TO CALENDAR

Quality first. Ship one vertical at a time.

WEEKS 1-2

0 · Harden

Baseline tests, schema v2, security review, Mesh Bench baseline.

WEEKS 3-5

1 · Evidence intelligence

Claim memory, adaptive research, EvidenceProof.

F01-F03

WEEKS 6-7

2 · Living network

Immutable versions, Watch, MethodHash.

F04 · F05 · F11

WEEKS 8-9

3 · Distribution

Lens, Share-to-Mesh, MCP and policy engine.

F07 · F08 · F10

WEEKS 10-11

4 · Visual edge

Image provenance, C2PA, one Guard wedge.

F06 · F09

WEEK 12+

5 · Proofs + pilots

zkTLS proof of concept, bounty and case pilots.

F13-F17

Throughout: F12 benchmark and evidence firewall. If capacity is tight, full ZK, bounty escrow and market integrations are cut before evidence quality is.

PROPOSED GATES · NOT PERFORMANCE CLAIMS

Delivery gates, not promises.

INTEGRITY

Old passports still verify

Existing routes and on-chain checks keep working. New hashes reproduce deterministically.

QUALITY

Measured against the MVP

Benchmark, recall, citation exactness and abstention reported. No gains claimed before measuring.

FRESHNESS

A correction becomes a version

One verified source correction creates a new immutable version, an accurate delta and one notification.

AGENTS

A missing field is never a pass

Policy calls are deterministic and every decision receipt is bound to an exact Passport and method.

SECURITY

Hostile input cannot steer scoring

Prompt-injection and SSRF test fixtures fail to change tools or scores. Private data stays private.

HONESTY

No invented integrations

Unavailable capabilities are marked unsupported, never faked with fabricated receipts or results.

A real demo with real services, or it does not count.

HYPOTHESES · NOT VERIFIED DEMAND

Open protocol. Paid infrastructure.

FREE

Consumers

Public verification, lookup, shareable current Passport, clear limitations.

PREMIUM

Watch + private vault

Higher quotas, alerts, private storage. Critical safety access is never paywalled.

DEVELOPERS

API + agents

Per investigation, storage and watch, webhooks, policy evaluation, SLA.

ORGANIZATIONS

Workspaces

Newsroom and research workspaces, audit reports, policy packs, signed attestations.

SPECIALIZED

Cases + bounties

Paid grant and DAO evidence review, evidence bounties, outcome dossiers.

PROTOCOL

Open core

Open Passport and hashing specs. We monetize the managed service. No token required.

Validation next: interview journalists, fact-checkers, Web3 agent developers and a grant or DAO operator. Recruit pilot users. Report partnerships only once they are documented.

Make evidence worth acting on.

A working product today. A clear, gated path to a living, inspectable, privacy-aware evidence network.

Our ask: an incubation grant tier, BD and distribution introductions, and pilot partners.
